Part III: Detailed Office Action

Claims 7-20 are pending and under consideration.

Rejections Over Prior Art:

5 The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

10 (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

15 This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

20 Claims 7-20 remain rejected under 35 U.S.C. 103(a) as being unpatentable over Hattori et al., Blood 91:4051-4055 in view of Lynch et al., U.S. Patent Number 5,830,469 for reasons of record in the previous Office Action, paper number 12 mailed 10/09/02 at pages 3-4. Applicants arguments filed 2/13/03, paper number 17, have been fully considered but are not deemed persuasive. Applicants argue that Lynch fails to suggest that anti-Fas antibodies can be used to treat GVHD, and
25 teaches away from using anti-Fas antibodies in such a method. This argument has been fully considered but is not deemed persuasive because Lynch is not the primary reference in this rejection but rather the secondary reference, and is cited as teaching that treatment with anti-Fas antibodies is functionally equivalent to treatment with anti-Fas Ligand antibodies, see col. 14, lines 13-24. The fact that Lynch may treat a totally different treatment for GVHD, that of administering TNF α ,
30 which treatment functions by a distinct mechanism from that of Hattori et al, has no bearing on the instant grounds of rejection, that it would have been obvious to modify the method of Hattori et al. by substituting anti-Fas antibodies for anti-Fas ligand antibodies, in view of the teachings of Lynch

et al. Accordingly, the invention remains *prima facie* obvious over the teachings of Hattori et al. in view of Lynch et al.
